(According to Booklet Code : B)**

**Section – A
(1-75): Analytical Ability**

(1-20)

1. Statement I:
33886 is not divisible by 3.
If $a \geq 1$ 3^a will not divide 33886.
But given $3^a = 1$ divides 33886
 $\Rightarrow a$ must be = 0
I alone is sufficient. Choice (1)

2. Let P be the set of prime numbers.
Consider statement I. A is a subset of R^+ .
A could be {2, 3} or {2, 3, 4} (among many other possibilities).
If $A = \{2, 3\}$, then $A \subseteq P$
If $A = \{2, 3, 4\}$, then $A \not\subseteq P$.
In the second case $A \not\subseteq P$.
Hence statement I is not sufficient.
Consider statement II
 $A \subseteq (-\infty, 0]$
If A is a non-empty subset of $(-\infty, 0]$, then $A \not\subseteq P$
If A is the null set, $A \subseteq P$.
 \therefore Statement II alone is not sufficient.
By combining the two statements, we can conclude that A is the null set.
 $\therefore A \subseteq P$. Choice (3)

3. Statement I
 $a^2 < 0$
So, $a < 0$
The real number is not positive.
I alone is sufficient.
Statement II:
 $a^2 - 5a + 6 < 0$
 $(a - 2)(a - 3) < 0$
 $2 < a < 3$
 a is positive.
Thus, II alone is also sufficient. Choice (1) or (2)
Note: This question can be answered from I alone or II alone. Hence the answer choice can be either (1) or (2).

4. Statement I:
It is not given whether the year is leap or non-leap year.
I alone is not sufficient.
Statement II:
This is sufficient as 1st January, 2088 is taken as Monday.
Choice (2)

5. let the length of rectangle be ' ℓ ' m and breadth be 'b' m.
Let the rate be Rs.K per metre.
Statement I:
 $Ib = 10,000$
The value of ℓ and b cannot be obtained.
Statement II:
Total cost = Rs.1,00,000 = $2(\ell + b)(K) = 1,00,000$
Combining I and II,
there are two equations and 3 unknowns, the answer cannot be obtained. Choice (4)

6. Statement I:
Any one of three numbers can be even,
I alone is not sufficient.

- Statement II
Given $b + c = \text{odd}$
One of the numbers of b and c is even. That implies 'a' cannot be even, a must be odd.
II alone is sufficient. Choice (2)
7. Statement I
 $5a, 5b$ and $5c$ are in A.P.
If the numbers are divided by 5, the resultant numbers will be in A.P. ; $\Rightarrow a, b, c$ are in A.P.
I alone is sufficient. Choice (1)

 8. Statement I
LCM (24, 30) = 120
If n is divisible by 24 and 30, it means n is divisible by 120. however, it is not necessarily divisible by 720.
I alone is not sufficient.
Statement II
 $n = (a)(a + 1)(a+2)(a+3)(a+4)(a+5)$
The product of 6 consecutive integers is always divisible by 6! or 720.
II alone is sufficient. Choice (2)

 9. Statement I
No information about 'c' is given
I alone is not sufficient
Statement II
No information about 'a' is given. II alone is not sufficient.
Combining both, sufficient information about each of the three numbers is given so, $a : b : c$ can be obtained. Choice (3)

 10. Statement I:
The initial or the final price of A is not given.
I alone is not sufficient.
Statement II:
The initial or the final price of B is not given.
II alone is not sufficient.
Combining both also we cannot answer since the initial and final prices of A and B are not known. Choice (4)

 11. From statement I, the given matrix is not invertable

$$\therefore \begin{vmatrix} \sin \theta & 0 & 0 \\ 2 & 2 & 0 \\ 3 & 4 & 1 \end{vmatrix} = 0$$

$$= \sin \theta (2 - 0) = 0 ; \Rightarrow \sin \theta = 0$$
Statement I alone is sufficient. Choice (1)

 12. In the expression $15n^2 + 8n + 6$.
Let $p = \frac{15n^2 + 8n + 6}{n} = 15n + 8 + \frac{6}{n}$.
When n is factor of 6, p is natural number otherwise p is not natural number.
From statement I
n divides 10
n is a factor of 10.
 $n = 1, 2, 5, 10$
If $n = 1, 2$, then n divides 6.
 $n = 5, 10$ 'n' does not divide 6.
I alone is not sufficient.
Statement II
n divides 3!. That means n divides 6. Hence the given expression is divisible by 6. II alone is sufficient. Choice (2)

13. Statement I
No information about $\angle C$
I alone is not sufficient.
Statement II
No information about $\angle A$
II alone is not sufficient.
Combining both, the answer can be obtained. Choice (3)
14. Statement I
 $A \cap B = \{1, 2, 3, 4, 5\}$
Set B can not be uniquely determined.
I alone is not sufficient.
Statement II
 $A - B = \{7, 8, 9, 10\}$
II alone is not sufficient.
Combining both, we can only say that B has at least five elements $\rightarrow 1, 2, 3, 4, 5$.
Also, B does not have the following elements 7, 8, 9, 10.
 \therefore combining both also we cannot answer the question.
Choice (4)
15. Statement I : $|a| > b$
Let $a = 2, b = 1$
So, $|a| > b$
Also $a > b$
Let $a = -2, b = 1$
So, $|a| > b$
But $a < b$
I alone is not sufficient.
Statement II
 $|a| = b$
 $a = b$ or $a = -b$
'b' is always non negative.
In either case a is not greater than 'b'.
II alone is sufficient. Choice (2)
16. Statement I: $\sin^2 \theta = 1$
 $\sin \theta = \pm 1$
 $\theta = \pi/2, -\pi/2$
I alone is not sufficient.
From statement II $\theta \in (0, \pi)$
II alone is not sufficient.
Combining I and II statements $\theta = \pi/2$.
Both I and II are together sufficient to answer the question.
Choice (3)
17. Statement I:
The length of any of the sides is not given
I alone is not sufficient.
Statement II:
The height of the triangle is given. Area of the equilateral triangle is $\frac{h^2}{\sqrt{3}} = \frac{144}{\sqrt{3}}$
II alone is sufficient Choice (2)
18. Statement I:
 $a^2 + b^2 = 0$
'a' and 'b' are real numbers.
So, $a = 0, b = 0$
 $\Rightarrow a^3 + b^3 = 0$
I alone is sufficient. Choice (1)
19. Statement I:
Let us take the following two cases.
Case (i):
 $x = -3$
 $y = 2$
So, $x^2 > y^2$
Case (ii):
 $x = -3$
 $y = 4$
So, $x^2 < y^2$
I alone is not sufficient.
Statement II is not sufficient since x and y are not given.
Combining I and II, we can say $x - y < 0$
- $\Rightarrow (x + y)(x - y) < 0$
[Since x, y are non negative real numbers, and $x + y > 0$]
So, $x^2 - y^2 < 0$. Choice (3)
20. Statement I:
 $a = 10k_1 + 5$
 $a = 105, 115, 125, 135, 145, 155, \dots$
I alone is not sufficient.
Statement II:
 $a = 8k_2 + 3$
 $a = 107, 115, 123, 131, 139, 147, 155$.
II alone is not sufficient.
Combining both, there is no unique solution. Choice (4)

22. Let the total cost be x.
6% of x + 8% of x = 70,000
14% of x = 70,000
 $\therefore x = \frac{100}{14} \times 70,000 = 5,00,000$. Choice (2)
23. Given 2% of total cost = 10,000
 \therefore total cost = 5,00,000
For a profit of 4%, the sales must be 5,20,000
 \therefore cost per book = $\frac{5,20,000}{13,000} = 40$ Choice (1)
24. Given 12% of total cost = 60,000
If transportation charges are reduced by half, the total cost is reduced by 4%
 $4\% = \frac{60,000}{3} = 20,000$ Choice (4)
25. If the total cost is x,
30% of x - 24% of x = 30,000
 \therefore 6% of x = 30,000
Advertising charges = 18% of x = 90,000 Choice (4)
- (26-30)

28. Total Number of dependents = $(40 \times 1) + (60 \times 2) + (35 \times 3) + (40 \times 4) + (15 \times 5) + (10 \times 6)$
 $= 40 + 130 + 105 + 160 + 75 + 60 = 560$. Choice (1)
29. Percentage of illiterate workers = $\frac{95}{200} \times 100 = 47.5\%$ Choice (2)
